

PROGRAMA EN DEVC++ PARA "HOLA MUNDO"

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
int main(int argc, char *argv[])
```

```
{
```

```
    printf("hola mundo");
```

```
    getch();
```

```
    return 0;
```

```
}
```

PROGRAMA EN DEVC++ PARA "PROBLEMA MATEMATICO"

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
int a,b,c; main(int argc, char *argv[])
```

```
{
```

```
a= 238/4;
```

```
b= 2*2*2;
```

```
c= a+b;
```

```
printf("resultado de a+b cuando a= 238/4, y b= 2*2*2.= %d",c);
```

```
    getch();
```

```
    return 0;
```

```
}
```
